

Stage 1 – Analysis and Specification of Requirements

1. Functional Requirements

The system needs to perform the following main functions:

Add Contact: Allows users to add new contact information (name, phone number, email, address).

Edit Contact: Allows updating the information of an existing contact based on ID or name.

Delete Contact: Completely deletes a contact from the address book.

Search Contact: Searches for contacts by name or phone number.

View All Contacts: Displays the entire list of saved contacts.

Categorize: Classifies contacts (e.g., Family, Friends, Work).

2. Non-Functional Requirements

Performance: The system must respond to search results within 1 second.

Usability: Simple interface, easy to use even for non-technical users.

Reliability: Data must be securely stored in a file or database so that it is not lost when the program is shut down.

Portability: Capable of running on multiple operating systems (Windows, Linux, macOS).
